Innova transformed a new Post 16 learning centre into a practical and stylish environment that appealed to older students of the school.

Brief

Ashton Community Science College's brief was to design and develop a new Post 16 learning centre into a practical and stylish environment that appealed to older students of the school.

The existing building needed a new lease of life and fresh outlook to create an inspiring base for young people in the sixth form college. A complete turnkey solution was required, including building works, new heating system, ceilings, decoration, flooring and all furniture.

Innova worked closely with the school to develop classrooms, an ICT suite, dining room, cyber cafe and washrooms.

The highest quality learning facilities fit for the 21st century.

Chris Lickiss, Headteacher

Seating | Various
 Carcase | Manufactured from 18mm MF MDF
 Edging | ABS Colour matched edging

Solution

The dining room featuring breakfast bars and colourful soft seating provides a modern, multi-functional space at the heart of the building.

A cyber cafe complete with the latest technology utilises unused corridor space.

Ashton's large featureless room was transformed into a spacious corridor and four tutorial rooms by delivering inspirational colour schemes and furniture creating light and airy spaces

The renovated ICT room complete with bespoke 'saw-tooth' style computer benching and an eye-catching feature storage wall, provides a fantastic modern, functional space for both staff and students – for individual working or teaching.

Complete refurbishment of male, female and disabled toilets, including full IPS panelling system, concealed services, vandal resistant fixtures and fittings, durable and easily maintainable surfaces and integrated hand wash stations reducing paper waste.

With Innova's strong eye for colour and expertise in creating striking and stimulating learning environments in the educational sector, the new 6th Form has become an exciting hub for students to enjoy.
